

TasNetworks is committed to delivering safe, reliable and efficient electricity and telecommunication network services while maximising value for all of Tasmania. In doing this, TasNetworks acknowledges that the protection of the natural environment, and the cultural heritage of Tasmania / Lutruwita, is a vital part of our corporate responsibility.

We recognise our potential to impact people and the planet and take a whole-of-business approach to environmental management.

We seek to embed environmentally sustainable practices across our business and demonstrate care for the environment in everything we do so that we can secure a sustainable future for generations to come.

Our primary Environment and Sustainability objective is to minimise the impact of our activities on the environment and cultural heritage. We will achieve this by:

- Proactively identifying and managing environmental and cultural heritage risks during all work, projects and operations.
- Ensuring we comply with state and federal environmental law. This includes all applicable regulations, standards, codes of practice, and other regulatory requirements.
- Setting and regularly reviewing environmental objectives and targets that drive improved environmental performance and maturity.
- Ensuring our team members and contractors are adequately aware, consulted, trained and competent to meet their responsibilities under the TasNetworks Integrated Management System.
- Empowering our people to make responsible choices and to prevent, intervene or stop activities with the potential to have adverse environmental or cultural heritage impacts until effective controls are in place.
- Monitoring, reviewing and reporting on our environmental performance and adjusting our systems and processes to ensure continual improvement.
- Integrating sustainable procurement principles into our activities and asset management practices.
- Supporting global efforts to mitigate the effects of climate change by working to reduce greenhouse gas emissions across our operations.
- Preparing and responding to climate change impacts on our network assets to ensure safe and reliable service to customers.
